BrightPath Tech

Response to RFP NW-2025-014: Vendor Onboarding Platform for Northwind Logistics

1. Executive Summary

BrightPath Tech offers a fast, low-cost vendor onboarding platform for Northwind Logistics. Our ready-made product can be configured and launched in just 14 weeks, at the most competitive price you will see in this process.

We understand that Northwind wants to replace spreadsheet-based vendor registration with a single online process, reduce manual checking, and give procurement staff a clear view of which vendors are approved. Our proposal focuses on getting those basics live quickly rather than on advanced features.

2. Proposed Solution and Approach

We will configure our standard onboarding product, which supports vendor registration, document upload, approval workflows and basic reporting. The product runs on a single cloud region. Integration with Northwind systems can be done through our import and export files and a basic API.

Customisation beyond configuration is limited to the items listed in the project scope. Scalability testing has not yet been performed for volumes above 500 vendors.

3. Timeline and Team

The project runs for 14 weeks: configuration (weeks 1-6), data load and testing (weeks 7-11), training and launch (weeks 12-14). A project manager and three consultants will be assigned.

Status updates are shared by email every two weeks. Northwind is expected to supply its vendor list in a spreadsheet by week 4 and to nominate a business contact who can answer questions within two working days. A formal risk plan will be prepared if requested.

4. Pricing

The table below shows our all-in pricing for core scope. Integration costs will be quoted separately once Northwind systems are reviewed.

Item	Price (USD)
Platform subscription (3-year term)	330,000
Implementation	240,000
Training	20,000
Email support (3 years)	100,000
Total	**690,000**

Pricing assumptions

- Prices in USD.
- Integration costs not included.

5. Security and Compliance

We follow industry best practices for security and take data protection seriously. ISO certification is planned for next year. Data is stored in encrypted databases. Details of audit logging and

independent testing are available on request.

6. Support and Experience

Support is provided by email during business hours. BrightPath Tech was founded in 2022 and has completed two similar projects for small customers. References are not included in this response.
