BrightPath Tech

Response to RFP NW-2025-014: Vendor Onboarding Platform for Northwind Logistics

Why BrightPath?

BrightPath Tech offers a fast, low-cost vendor onboarding platform for Northwind Logistics. Our ready-made product can be configured and launched in just 14 weeks, at the most competitive price you will see in this process.

We understand that Northwind wants to replace spreadsheet-based vendor registration with one online process, reduce manual checking, and give procurement staff a clear view of which vendors are approved. We focus on getting those basics live quickly rather than on advanced features.

What You Get

- Vendor self-registration and document upload
- Approval workflows with email alerts
- Basic reporting and exports to spreadsheet
- Standard integration via file import and export

The product runs on a single cloud region. Integration with Northwind systems can be done through import and export files and a basic API. Scalability testing has not yet been performed for volumes above 500 vendors.

How We Deliver

The project runs for 14 weeks: configuration (weeks 1-6), data load and testing (weeks 7-11), and training and launch (weeks 12-14). A project manager and three consultants will be assigned. Status updates are shared by email every two weeks.

Northwind supplies its vendor list in a spreadsheet by week 4 and nominates a business contact who can answer questions within two working days.

Pricing

What	USD
Platform subscription (3-year term)	330,000
Implementation	240,000
Training	20,000
Email support (3 years)	100,000
Total	**690,000**

Integration costs will be quoted separately once Northwind systems are reviewed.

Security

We follow industry best practices and take data protection seriously. ISO certification is planned for next year. Data is stored in encrypted databases. Details of audit logging and independent testing are available on request.

About Us

BrightPath Tech was founded in 2022 and has completed two similar projects for small customers. Support is provided by email during business hours. After go-live, software updates are applied to all customers at the same time, normally once a month. Training is two online sessions for administrators plus a user guide for vendors.
